

Corrections

Before watching this section please pay attention to these corrections:

Google Feed API Depreciated

- Unfortunately the main API that we use in this course to get the RSS feed as json has been deprecated by google.
- This section will cover an alternative using another service called superfeedr.
- The starter and completed code has been updated to use superfeedr, so if you are using the old starter code (you won't see any reference to superfeedr in the old starter code) then start another project again using the new updated starter code.

Create an account at superfeedr.com

- Create an account at superfeedr: <https://superfeedr.com/subscriber/>
- It will send you an email, click the link in the email to confirm.

Subscribe to your feed in the superfeedr dashboard

- Unlike the old google feed api with superfeedr you first has to subscribe using their dashboard.
- Go to [https://superfeedr.com/users/\[YOUR-USERNAME\]/subscriptions](https://superfeedr.com/users/[YOUR-USERNAME]/subscriptions) (replace [YOUR-USERNAME] with your username)
- Click New Subscription.
- Enter the Topic URL as http://feeds.feedburner.com/TEDTalks_video
- Choose json Subscription Format
- Use this link as the Webhook Url <https://push.superfeedr.com/dev/null>
- Press Create

New Subscription

TOPIC URL (HUB.TOPIC)

SUBSCRIPTION FORMAT

SUBSCRIPTION WEBHOOK URL (HUB.CALLBACK)

SECRET

Close Create

Create and use an API token

- Go to [https://superfeedr.com/users/\[YOUR-USERNAME\]/tokens](https://superfeedr.com/users/[YOUR-USERNAME]/tokens) (replace [YOUR-USERNAME] with your username)
- Click Create a Token
- Choose the token name as "TEDRSSAPP" and make sure all the boxes are ticked, then click CREATE.

Create a Token

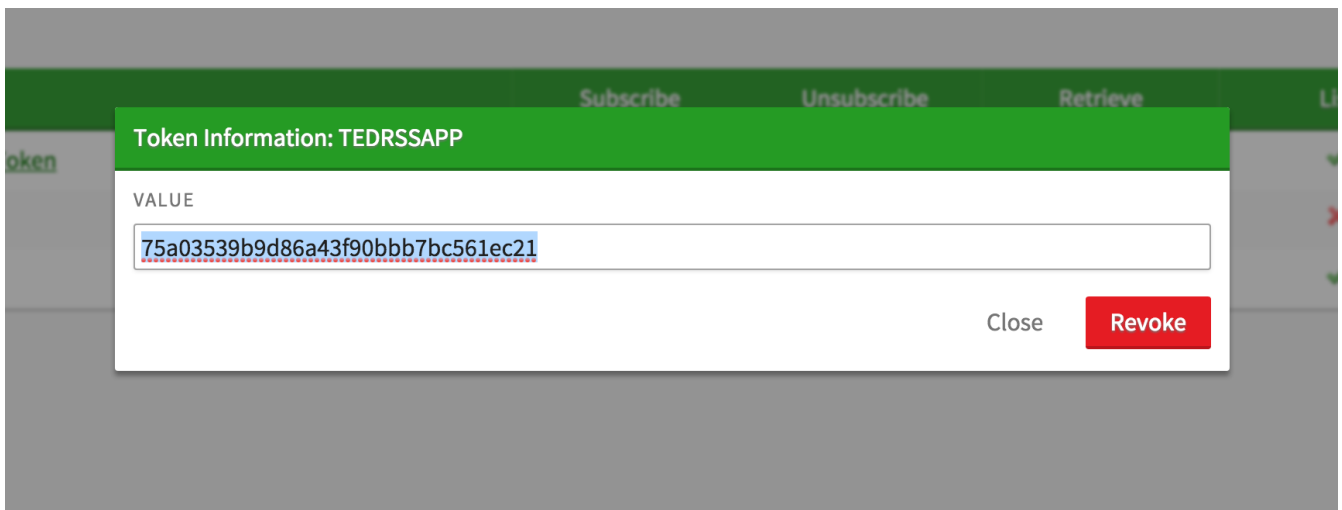

TOKEN NAME

Choose the token's capabilities:

SUBSCRIBE ☒ UNSUBSCRIBE ☒ RETRIEVE ☒
LIST ☒ XMPP ☒

Cancel Create

- To get the actual token value, click the name of your token and a box pops up.

- Then in `js/services.js` replace the code

```
superfeedr.auth('<YOUR-SUPERFEEDER-USERNAME>', '<YOUR-SUPERFEEDER-API-TOKEN>');
```

With your username and the api token you just generated.

Thats it!

Ignore any reference to google feed api in the videos, and just use the superfeedr code above.
