

# Corrections

---

Before watching this section please pay attention to these corrections:

## Remove last slash from android path

---

- If you are experiencing problems with the sound not playing on android this might be the cause.
- When explaining how to add support for android this code to adjust the path for android has an error.

```
if (ionic.Platform.is('android')) {  
  src = '/android_asset/www/' + src;  
}
```

- The www folder should not end in a / corrected code is:

```
if (ionic.Platform.is('android')) {  
  src = '/android_asset/www' + src;  
}
```
