

Setup

1) Run the below command to create the project using the starter project we've created for this application.

NOTE: We are setting up this project to use sass so we can edit the stylings.

```
$ ionic start tedrssapp https://github.com/
codecraftpro/ionic-starter-tedclone

$ ionic setup sass
```

2) Setup the required bower packages

```
bower install ngCordova
```

3) Edit the ionic.app.css file under the scss folder so it has these variables defined.

```
$positive: #E62B1E;
$font-family-serif: 'Georgia', serif !default;

// Include this file at the end.
@import "www/scss/style.scss";
```
