

Setup

1) Run the below command to create the project using the starter project we've created for this application.

NOTE: We are setting up this project to use sass so we can edit the stylings.

```
$ ionic start mealtrack https://github.com/codecraftpro/ionic-starter-mealtrack  
$ ionic setup sass
```

2) Setup the required bower packages

```
bower install ngCordova  
bower install angular-moment  
bower install angular-messages
```

3) Edit the ionic.app.css file under the main scss folder so it contains these variables and @imports.

```
$royal: #73C8A9;
$positive: #73C8A9;
$dark: #373B44;
$stable: #DEE1B6;
$assertive: #BD5532;

@import url(http://fonts.googleapis.com/css?
family=Domine:400,700);
$font-family-base: 'Domine', serif;

$ionicons-font-path: "../lib/ionic/fonts" !default;

@import "www/lib/ionic/scss/ionic";
@import "www/scss/form.scss";
@import "www/scss/styles.scss";
```
